**Subject:** Advice Re: Data Breach

Good afternoon,  
We believe our company may have suffered a breach of several computer systems, possibly including customer data. I've read a number of Michael's articles on NBR and would be good to have expert advice on handling this situation. Is this something you can give advice on?

Regards,

Todd

Hi Todd,  
Thank you for your email. We may be able to assist and/or suggest  
others to help.  
Might you call me?  
Regards

Michael

Thank you for the prompt reply, Michael. As you can probably guess, this is not an easy process. I've attached a situation report from our engineers describing what they've managed to decode. The password is "breach2016".

Regards,

Todd Marsh

## Cyber Tips for Older Americans

---

### WHAT IS CYBERSECURITY

Cybersecurity is general Internet safety, which includes protection of anything connected to or accessible by the Internet- from networks themselves to the information stored in computers. Technology has changed tremendously in the past 25 years, and it only continues to advance. The Internet has brought us so many benefits; email, electronic messaging, and personal websites allow us to stay connected, informed, and involved with family and friends. The Internet also provides an easy way to shop, plan travel, and manage finances. However, with these increased conveniences comes increased risk.

Baby boomers embrace new technologies 20 times faster than members of Gen Y, including social sites, podcasts, and blogs. <sup>i</sup>

Just like any other public environment, the Internet requires awareness and caution. Just as you use locks to keep criminals out of your home, you also need safeguards to secure your computer. Many of the crimes that occur in real life are now done - or at least facilitated - through the Internet. Theft, abuse, and more can be and are being done online. Many scammers target older Americans via emails and websites for charitable donations, dating services, auctions, health care, and prescription medications.
